System Context

An API client sends JSON requests to Express. The service authenticates protected operations, accesses MongoDB through Mongoose, and calls Google Gemini for generation or summarization.

Level 0 Flow

- Client -> Express REST API -> JWT check for protected routes -> Mongoose -> MongoDB.
- AI flow: Express service -> Google Gemini -> Express response -> API client.

Data Elements

- API client sends requests and handles responses.
- Express routes requests to controllers/services and returns JSON.
- JWT middleware checks authorization context.
- MongoDB stores user and blog data through Mongoose.
- Gemini returns generated content or a summary.

Boundary

Exact schemas, validation rules, and production deployment topology were not supplied.
